

Keeping in touch

When members of your workforce are on the road, you need a way of exchanging up-to-date information with them. Australian field service management software provider Proware has released

TSM Remote, a wireless Pocket PC add-on to Proware's The Service Manager software solution for small- and medium-sized service repair and maintenance companies. It allows users to create quotes in the field and convert them to jobs without re-keying. Customers can sign for jobs directly on the Pocket PC and payments can be processed by an in-field credit card gateway.

Proware's TSM Remote retails from \$50 per user per month. Phone (02) 9690 3888 or visit the website theservicemanager.com
